

Use Case 1 : User adds a note.

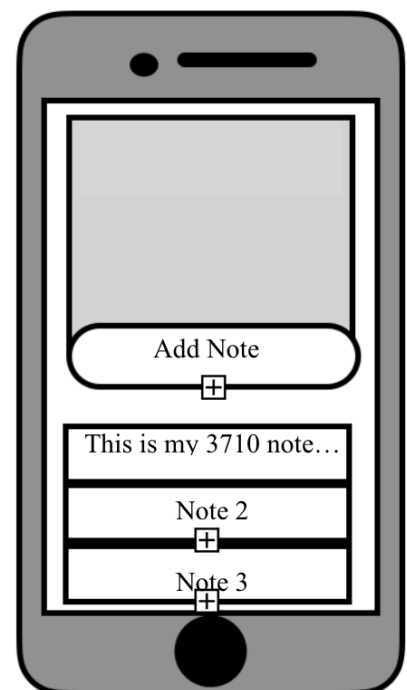

Step 1: The application shows the User Interface.

Step 2: The user inputs into the file and then clicks the Add Note button.

Step 3: The application displays the note in the list below, and the Add Note area is cleared.

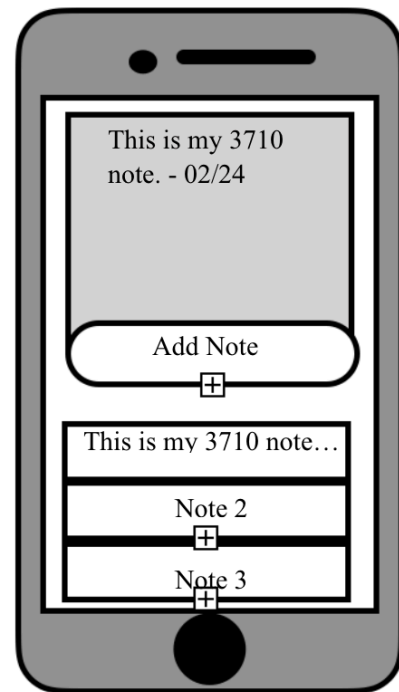

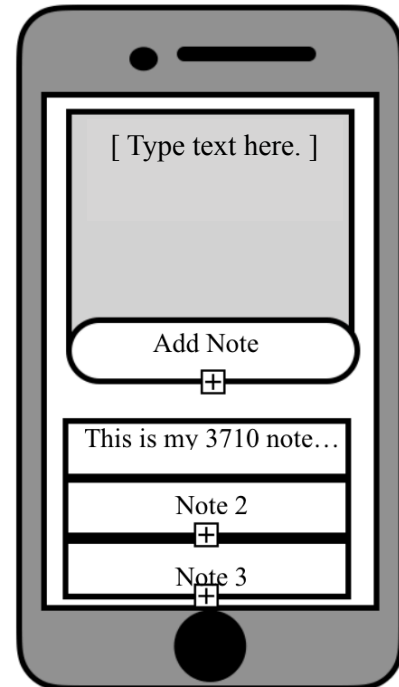

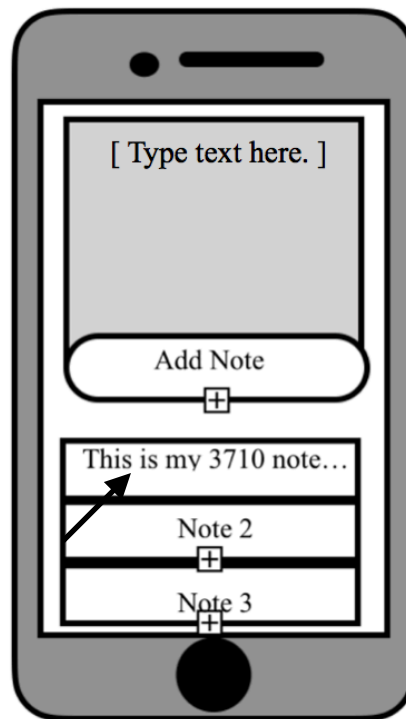

Use Case 2 : User retrieves an old note.

Step 1 : The application shows the User Interface.

Step 2 : The user selects the note he/she wants to retrieve.

Step 3 : The system displays the desired note.

Demonstration Proofs:

I'm sorry I'm turning this in late. I honestly thought I had pushed all of this to GitHub and submitted the URL to Canvas.
